

Wing pattern for Fairy DVD

use 24-26 gauge wire

- These lines indicate the original 4 looped wires
- This line indicates the wire that is to be added to the edge of the wing.
- This line indicates the smaller wire that was added to secure the design or enhance the flared shape of the wings.

Flatten the wire frame down onto a piece of thick window glass, use thread secured by tape if necessary. Brush on a thin coat of transparent liquid polymer Sculpey. Make sure the wire is coated top and bottom. Bake at 285 degrees for 20 minutes. Don't breathe the fumes when you open the oven!
